The conveyor belt sorting robot is an automated device that integrates sensors, control systems and mechanical structures. It mainly cooperates with the conveyor belt to realize automatic identification, sorting and transportation of items on the conveyor belt. This robot is usually installed on one side or above the conveyor belt. It detects the characteristics of the items (such as size, shape, weight or barcode, etc.) through sensors, and then controls the robot arm or sorting mechanism to grab the items from the conveyor belt and put them into the designated sorting port or container.

The global Conveyor Belt Sorting Robot market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
