According to our (LP Info Research) latest study, the global Coolant for Charging Pile market size was valued at US\$ million in 2022. With growing demand in downstream market and recovery from influence of COVID-19 and the Russia-Ukraine War, the Coolant for Charging Pile is forecast to a readjusted size of US\$ million by 2029 with a CAGR of % during review period.

The research report highlights the growth potential of the global Coolant for Charging Pile market. With recovery from influence of COVID-19 and the Russia-Ukraine War, Coolant for Charging Pile are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Coolant for Charging Pile. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Coolant for Charging Pile market.

The liquid-cooled charging pile includes a circulating cooling component and a heat dissipation component; the circulating cooling component includes a first liquid storage tank, a first driving source, a charging module, a charging gun, a rechargeable battery, and a first heat exchanger connected to form a closed cooling cycle. The first liquid storage tank is used to store the first cooling liquid. The first driving source is used to drive the first cooling liquid to flow in the cooling cycle. Both the charging gun and the rechargeable battery are electrically connected to the charging module. This solution can realize the cooling of the charging module, the charging gun and the rechargeable battery at the same time. The cooling effect is better, the noise is lower, the charging

power and charging current of the charging pile can be increased, and the charging efficiency can be improved. Moreover, the rechargeable battery can provide stable and fast charging power for the power-off area. The use of liquid cooling can reduce the exposed parts, the protection level is higher, and the environmental adaptability is stronger.
