Coolant Control Valves also known as coolant flow control valves, which are needed inside this system for shutting off the coolant flow, switching over coolant circuits and regulating the coolant flow. The valve enables functions for decreasing the engine warm up time through “engine zero flow”, enabling faster cabin warm up by directing the heat to the heat exchanger core and in- or decreasing the coolant flow for an optimized engine temperature.

The global Coolant Control Valves market size is projected to grow from US\$ 256 million in 2024 to US\$ 500 million in 2030; it is expected to grow at a CAGR of 11.8% from 2024 to 2030.
