The cooled near-infrared fiber spectrometer is a high-precision spectral analysis instrument that integrates near-infrared spectroscopy technology and a cooling system. Based on the characteristic spectral signals generated when the sample absorbs, scatters or reflects near-infrared light, the chemical information, structural information and other related characteristics of the sample can be obtained by detecting and analyzing these signals. The cooled near-infrared fiber spectrometer has the characteristics of high resolution, high sensitivity, wide spectral range, good stability and rich interfaces. It is widely used in industry, environmental monitoring, biomedicine, scientific research and other fields.
