Cooled Spectrometer is a high-precision, high-stability instrument used to measure the spectral properties of materials. It uses a cooling device (such as a Peltier cooler) to reduce the sensor temperature, thereby reducing noise and improving signal quality. Cooled spectrometers are usually equipped with high-performance optical components (such as gratings or interference filters) to perform accurate spectral measurements over different wavelength ranges. This instrument is widely used in astronomical observations, spectral analysis, research fields, etc., providing accurate spectral data for scientific research and industrial applications.
