The global Cooling and Dust Removal Atomization System market size is predicted to grow from US$ 623 million in 2025 to US$ 900 million in 2031; it is expected to grow at a CAGR of 6.3% from 2025 to 2031.

The cooling and dust removal atomization system is an environmentally friendly system that uses high-pressure spray or ultrasonic atomization technology to atomize water into micron-sized particles, achieves cooling through evaporation and heat absorption, and condenses dust through water mist to make it settle, thereby achieving the effect of dust removal. The system can effectively reduce the working environment temperature, reduce suspended dust in the air, improve air quality, and suppress static electricity and reduce the risk of dust explosion. It is widely used in metallurgy, mining, construction, garbage disposal, chemical industry, textile and other industries to improve the working environment and meet environmental protection and occupational health and safety requirements.

United States market for Cooling and Dust Removal Atomization System is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Cooling and Dust Removal Atomization System is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
