A cooling tower water filter (or cooling tower water filtration system) is a specialized filtration and water treatment device installed in the circulating water system of a cooling tower. It removes suspended particles, silt, rust, algae, biological slime, and some oil contaminants from the circulating water, ensuring the efficient and stable operation of the cooling tower and its associated heat exchange equipment (condensers, plate heat exchangers, shell-and-tube heat exchangers, etc.). It typically exists as a side-channel filtration system or a main loop filtration unit and can be configured with automatic self-cleaning filters, multi-media filters, disc filters, bag/cartridge filters, etc., and is linked to water treatment units such as chemical dosing, sterilization, and wastewater discharge. The average price of this product is approximately US\$1200 per unit, with global sales of approximately 640,000 units.
