The global Copolyester Elastomer market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Copolyester elastomer is a synthetic rubber consisting of hard polyester crystallites dispersed in a flexible matrix. Copolyester elastomers are thermoplastic. They are used in a variety of applications such as tires and automotive parts. They provide resistance to heat, fuel, oil and chemicals. They are block copolymers in nature. They have physical and chemical properties similar to vulcanized rubbers. Other applications include hose and tubing, cable and wire among others. These elastomers do not require compounding thus eliminating the addition of reinforcing agents or cure systems.

Thermoplastic polyester elastomer is a physical mix of polymers which consist of materials which possess both thermoelastic and elastomeric properties. Copolyester elastomers help in increasing the fuel efficiency by reducing the overall weight of the automobiles. Thus, growing demand for fuel efficient automobiles is expected to drive the demand for these elastomers within the forecast period. These elastomers have excellent tensile strength, abrasion resistance and electrical properties. In addition, they have resistance to chemicals and oil. This increases their utility in various industries. Additionally, shift towards replacing polyvinyl chloride (PVC) with copolyester and other elastomers are expected to drive the copolyester market. However, fluctuation in the raw material prices is expected to hamper the demand for copolyester elastomer within the forecast period. Ongoing research and development on copolyester elastomers for

medical applications is expected to open avenues for these elastomers.
