Copolyester Thermoplastic Elastomer (TPC) is a type of material that combines the properties of both thermoplastics and elastomers. It is produced through copolymerization of polyester segments with other monomers, resulting in a material that exhibits elasticity and flexibility like rubber while also being moldable and processable like thermoplastics. TPCs offer a balance of properties such as excellent chemical resistance, high tensile strength, good abrasion resistance, and weatherability. They are used in various applications including automotive parts, consumer goods, industrial components, medical devices, and electrical connectors. TPCs are valued for their versatility, durability, and ability to withstand a wide range of environmental conditions.
