Power electronics and circuits produce a lot of heat when they work. Heatsink materials help to eliminate chip heat, transferring it to other media and keeping the chip stable. Molybdenum copper, tungsten copper and other materials, combined with low thermal expansion rate of molybdenum, tungsten and conductivity of copper heat, can effectively release the heat of electronic device and contributes to the cooling of IGBT module, RF power amplifier, LED chips and other products. They are thus applied as heat sink materials in large-scale integrated circuit and high power microwave devices.
