Copper Anti-tarnish Agent is a functional surface treatment chemical used to prevent oxidation, sulfidation, corrosion and discoloration on copper and copper alloy surfaces. It typically forms a thin protective film on red copper, brass, bronze, copper-plated layers, copper foil and copper wire through organic complexation-adsorption, inorganic conversion film formation, silane coupling film formation, organic sealing film formation or composite synergistic protection, thereby delaying the erosion of copper surfaces caused by air, moisture, sulfides, salt spray and thermal environments, while maintaining color, electrical conductivity, solderability and appearance stability.

The downstream applications of Copper Anti-tarnish Agent mainly include electronic and electrical, transportation, architectural decoration, consumer product, industrial manufacturing, aerospace and other fields. Its value is mainly concentrated in formulation stability, film uniformity, environmentally friendly chromium-free technology, customer process adaptability and long-term protection performance.
