The global Copper-beryllium (CuBe) for Connectors market size is predicted to grow from US\$ 240 million in 2025 to US\$ 325 million in 2032; it is expected to grow at a CAGR of 4.4% from 2026 to 2032.

Copper-Beryllium (CuBe) for connectors is a beryllium-containing copper alloy used in critical electronic connector components such as springs, pins, terminals, and micro-contacts. It combines high strength, excellent elasticity, wear resistance, and good electrical conductivity, meeting the demands of high-frequency, high-speed, and high-reliability applications. CuBe can be processed into strips, rods, or wires and further enhanced through heat treatment and surface finishing to improve hardness and spring life. This material is widely used in telecommunications, automotive, aerospace, and precision electronics industries, providing durable and reliable connector performance.

In 2025, the global production of copper-beryllium (CuBe) for connectors reached 5,825 tons, with an average selling price of \$42/kg and a production capacity of approximately 10,000 tons. The industry gross margin was around 30%–40%. Cost structure: direct materials accounted for about 86%, manufacturing overhead about 12%, and labor costs about 2%. Industry chain: upstream consists of copper, beryllium, and alloy additives; downstream includes electronics, telecommunications, automotive, aerospace, and precision manufacturing industries.
