Copper biocides are antimicrobial agents derived from copper compounds, such as copper sulfate, copper oxide, and chelated copper complexes, used to control the growth of bacteria, fungi, algae, and other microorganisms. These compounds function by disrupting microbial cell membranes and interfering with enzyme activity, ultimately leading to cell death. Due to their broad-spectrum efficacy and long-lasting residual effect, copper biocides are widely applied in agriculture (as fungicides and algacides), water treatment systems, marine antifouling paints, wood preservatives, and antimicrobial coatings. Their effectiveness, relative environmental safety, and low toxicity to humans make them a popular choice across diverse industrial and environmental sectors.

United States market for Copper Biocides is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Copper Biocides is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
