The report requires updating with new data and is sent in 48 hours after order is placed.

CCA or Copper Clad Aluminum Cable is composed of copper clad aluminum wires which are made from an aluminum core clad with a thin layer of copper. The copper makes up 10% , 15%, and 40% of the wires volume while the rest composes of aluminum alloy wire. Copper clad aluminum is used practically in high-quality coils where weight is very important. Copper clad aluminum wire incurs a low manufacturing cost and thus yields a higher profit during sales for manufacturers compared to counterparts who sell the actual copper equivalents.
