As the substrate material in the manufacture of printed circuit boards, copper clad laminates mainly play the role of interconnection, insulation and support for the printed circuit board, and have a great impact on the transmission speed, energy loss and characteristic impedance of the signal in the circuit. Therefore, the performance, quality, processability, manufacturing level, manufacturing cost, and long-term reliability and stability of the printed circuit board depend to a large extent on the copper clad laminate.

The copper clad laminate manufacturing industry is a sunrise industry. It has broad development prospects along with the development of the electronic information and communication industries. Its manufacturing technology is a high-tech that intersects, penetrates, and promotes multiple disciplines. It is inseparable from the development of the electronic information industry, especially the printed circuit industry. Its progress and development have been driven by the innovation and development of electronic products, semiconductor manufacturing technology, electronic mounting technology and printed circuit board manufacturing technology.

Prepreg is a prepreg sheet product made by immersing a matrix in reinforcing fibers, and is an intermediate material for composite materials. Compared with other materials, composite materials produced by Prepreg can improve the strength, hardness, corrosion resistance, fatigue life, wear resistance, impact resistance, lightweight and other characteristics. They are often used in the aerospace industry. Production of industrial, sports, and leisure products.
