Copper is a chemical element with symbol Cu (from Latin: cuprum) and atomic number 29. It is a soft, malleable, and ductile metal with very high thermal and electrical conductivity. A freshly exposed surface of pure copper has a pinkish-orange color. Copper is used as a conductor of heat and electricity, as a building material, and as a constituent of various metal alloys, such as sterling silver used in jewelry, cupronickel used to make marine hardware and coins, and constantan used in strain gauges and thermocouples for temperature measurement.

The rise in urbanization has elevated the consumer lifestyle and shifted their preference towards copper products for architecture, including plumbing, wall cladding, roofs, and others. Moreover, the imitation of green buildings is likely to supplement the copper & copper manufactured products market growth. However, widely used of copper substitutes, namely PVC, optical fiber, metal substitutes, and cross-linked polyethylene could hamper the copper & copper manufactured products market growth.
