The global Copper Sulfate Algaecide market size is predicted to grow from US$ 101 million in 2025 to US$ 152 million in 2032; it is expected to grow at a CAGR of 6.2% from 2026 to 2032.

Copper sulfate algaecide is a chemical agent with copper ions as the active ingredient. It has the appearance of blue asymmetric triclinic crystals or powders. It is easily soluble in water and the aqueous solution is acidic. The algaecide combines copper ions with sulfhydryl groups in algae cell surface proteins and enzymes to destroy the photosynthetic reaction system of algae cells, inhibit their growth metabolism and cause cell death, thereby effectively controlling the reproduction of algae in the water. Its algae removal principle is based on the toxic effect of heavy metal ions. It can significantly reduce the biomass of aquatic plants such as green algae and black algae in closed or semi-closed environments such as swimming pools and landscape water bodies, and prevent water turbidity, discoloration and eutrophication caused by excessive algae proliferation.

United States market for Copper Sulfate Algaecide is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
