The global Copper Tungsten Alloys market size is projected to grow from US\$ 145 million in 2022 to US\$ 186.1 million in 2029; it is expected to grow at a CAGR of 186.1 from 2023 to 2029.

Global core copper tungsten players include Sumitomo Electric, Advanced Technology & Materials and Plansee etc. The top 5 companies hold a share about 31%. Asia-Pacific is the largest consumer, who owned nearly 64% share in global consumption market in 2021. The follower is Europe, accounting for about 18% sales share in 2021.

In terms of types, WCu 80/20 type occupied the largest sales share of about 35% in 2021.

Based on the application, High Voltage Electrical Switch constitutes the largest application market for Copper Tungsten, accounting for about 38% of global share.

Copper–tungsten (tungsten–copper, CuW, or WCu) is a mixture of copper and tungsten. As copper and tungsten are not mutually soluble, the material is composed of distinct particles of one metal dispersed in a matrix of the other one. The microstructure is therefore rather a metal matrix composite instead of a true alloy. The material combines the properties of both metals, resulting in a material that is heat-resistant, ablation-resistant, highly thermally and electrically conductive, and easy to machine.
