Milling is the process of removing or cutting down the unwanted part of a machine or tool to equip the machine with a particular feature.

The milling machine has several cutting points and it rotates around its axis. A little bit of the metal is removed by every cutting point; due to several cutting points and the speed of rotation, a large amount of metal can be removed in a short span of time. The copy milling technique is where a design or cut cannot be made on its own. Hence, first the master template is made, which then guides the tool path and the other parts are copied from the template.
