Compound cuts include both a bevel and miter. A compound miter saw adds the ability to make bevel cuts in addition to its mitering ability. You'll want to make sure you have this feature anytime you work with crown molding or other trim that gets installed on a wall. Mitering occurs when you rotate the saw blade around a base. That base holds a scale that tells you the miter angle in degrees. The cordless equipment can perform multiple cuts at the exact angle in fast succession, saving hours off work.
