The global Core Binder System market size is predicted to grow from US$ 599 million in 2025 to US$ 883 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

In 2024, global Core Binder System production reached approximately 552 kilotons with an average global market price of around US$1,050 per ton. Single-line annual production capacity averages 36 kilotons with a gross margin of approximately 27%. The upstream of the Core Binder System primarily consists of raw materials such as phenolic resins, urea resins, and inorganic binders, which are mainly concentrated in the chemical raw materials sector. In downstream applications, industrial casting accounts for approximately 70% of consumption, 3D printing for about 20%, and other sectors for roughly 10%. The market demand for the Core Binder System is continuously growing, with opportunities arising from the increasing demand for precision casting in intelligent manufacturing and personalized customization, as well as the rising need for environmentally friendly binder systems.

A Core Binder System is a critical component in the foundry process, providing a stable and precise framework for casting complex geometries by ensuring that sand cores maintain their integrity during the casting cycle. It is engineered to deliver optimal strength, permeability, and reusability, which are essential for achieving high-quality castings with intricate details and minimal defects.

United States market for Core Binder System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Core Binder System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
