Core making equipment refers to machinery used in the manufacturing process to create cores for metal casting molds. These cores are essential for shaping internal cavities or hollow sections in cast metal parts. The equipment typically includes various types of machines such as core shooters, which inject a mixture of sand and binder into core boxes to form the core; core sand mixers, which prepare the sand mixture; and core ovens or curing systems, which harden the sand cores to achieve the desired strength. Core making equipment ensures precise and efficient production of complex core shapes required for high-quality castings in industries like automotive, aerospace, and heavy machinery.

United States market for Core Making Equipment is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
