The global Core Making Machines market size is predicted to grow from US\$ 89.02 million in 2025 to US\$ 117 million in 2032; it is expected to grow at a CAGR of 4.0% from 2026 to 2032.

Core Making Machines are specialized equipment used in the foundry industry to produce cores, which are essential components in casting processes. Cores are used to create cavities or complex internal geometries in cast metal parts by placing them inside the mold. The core is made of sand or other materials that withstand high temperatures, and it is removed after the metal casting solidifies.

The core making machine is well designed and easy to operate, and can flexibly respond to the manufacturing needs of cores of different shapes and sizes. During the core making process, the temperature is precisely controlled to ensure the hardening quality and performance of the core. With the transformation and upgrading of the manufacturing industry and the continuous advancement of casting technology, the market demand for core making machines will continue to grow. Especially in the fields of high-end equipment manufacturing, new energy vehicles, aerospace, etc., the increasing demand for high-precision and high-quality castings will bring greater development opportunities to the core making machine industry.
