The global Core Shooter Machine market size is predicted to grow from US$ 4210 million in 2025 to US$ 6014 million in 2031; it is expected to grow at a CAGR of 6.1% from 2025 to 2031.

The Core Shooter Machine is used to make cores with laminated sand and is applicable to both hot and cold core boxes. The characteristics of the Core Shooter Machine are the application of two guide pillars, vertical parting of the open and closed mold, simultaneous installation of two different molds, the middle fixed frame can be installed on both sides of the fixed mold, left and right open and closed mold (equivalent to double mold frame). The working principle of core shooting machine is to shoot the core sand mixture with liquid or solid thermosetting resin as binder into the heated core box, the sand core is preheated in the core box and quickly hardened to a certain thickness, which is taken out to form the finished sand core with smooth surface and precise size.%li%

The global core shooter machine market refers to the market for machines used in the foundry industry to produce sand cores. Sand cores are used in casting processes to create internal cavities or hollow spaces in metal components.
