Corn Oil Extraction Aid is a patented, non-polymeric liquid product. It is mainly used to increase the release of corn oil during the mechanical refining process, thereby significantly increasing the yield of corn oil. In addition, this additive can also reduce solids in the oil, making the resulting corn oil cleaner and of higher quality. Because it reduces system deposits, it also reduces downtime for system cleaning and maintenance. Its mechanism of action is mainly to improve the detachment effect of corn oil during centrifugation.

The global Corn Oil Extraction Aid market size is projected to grow from US\$ 348 million in 2024 to US\$ 447 million in 2030; it is expected to grow at a CAGR of 4.3% from 2024 to 2030.
