A corn oil processing machine is a type of equipment used to extract oil from corn germ, which is the part of the corn kernel that contains the oil. Corn oil is a popular cooking oil due to its high smoke point and neutral taste. The process of extracting oil from corn germ typically involves several steps, from seed preparation to oil extraction and refining. Corn oil processing machines can vary in size and complexity, ranging from small-scale units suitable for local or artisanal oil production to large-scale industrial machines used in commercial oil refineries. The machines are designed to be efficient, reducing waste and labor while producing high-quality oil that can be used for cooking, frying, and in the production of various food products and biodiesel. Corn oil is also used in the manufacturing of cosmetics, soaps, and lubricants.

United States market for Corn Oil Processing Machine is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
