A Corneal Bandage Contact Lens, often referred to as a therapeutic contact lens or simply a bandage contact lens, is a type of specialized contact lens used for therapeutic purposes to protect and heal the cornea (the clear, front surface of the eye). It is designed to provide a protective barrier, reduce discomfort, and promote the healing process of various corneal conditions and injuries.

The primary purpose of a Corneal Bandage Contact Lens is to protect the cornea and provide a soothing environment for the eye to heal. It acts as a bandage for the cornea, preventing eyelid movement from directly irritating the corneal surface. These lenses are used in cases of corneal abrasions, corneal ulcers, post-surgical recovery, or other

corneal injuries. They provide protection, reduce pain, and enhance comfort during the healing process.
