The global Coronary Plaque Rotational Atherectomy market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Coronary Plaque Rotational Atherectomy is a minimally invasive interventional procedure designed to treat calcified or hardened plaques in the coronary arteries. When plaque causes stenosis and restricts blood flow, traditional balloon angioplasty or stent placement may not be effective. Using a high-speed, diamond-coated burr, this procedure grinds the plaque into tiny particles, which are carried away by the bloodstream, thereby restoring proper blood flow in the coronary artery.
