A coronary scored balloon dilation catheter, also known as a scored balloon dilatation catheter or a cutting balloon catheter, is a special medical device. It is mainly used during coronary interventional surgery to deliver a balloon into the coronary artery through a catheter, and then use the expansion of the balloon and the cutting effect of the scored blade to expand the narrowed or blocked coronary artery and remove the plaque on the blood vessel wall. Plaque or calcified material. The catheter combines balloon dilation and cutting capabilities to provide more precise and safer treatment during surgery, thereby improving blood supply to the heart. In addition, this kind of catheter usually consists of a catheter body, a balloon, a radiopaque marker, a connector and other structures. The outer surface of the balloon has a knife-like structure to make the surgical process more precise and safe.

The global Coronary Scored Balloon Dilatation Catheter market size is projected to grow from US\$ 692 million in 2024 to US\$ 1012 million in 2030; it is expected to grow at a CAGR of 6.5% from 2024 to 2030.
