Corporate Carbon Accounting is the process by which companies measure, track, and report their greenhouse gas (GHG) emissions, both direct and indirect, as part of their environmental and sustainability efforts. This accounting involves quantifying the carbon footprint of a company's operations, including emissions from energy use, transportation, waste, and the supply chain. The goal is to provide a comprehensive assessment of the company's impact on climate change, which can then be used to set reduction targets, comply with regulations, and communicate sustainability efforts to stakeholders. Corporate Carbon Accounting is critical for companies aiming to reduce their environmental impact, improve energy efficiency, and meet the growing demands for transparency and accountability from consumers, investors, and regulators. It typically follows standardized frameworks such as the Greenhouse Gas Protocol, ensuring consistency and comparability in reporting.
