Any appliance, software or hosted facility that protects corporate workers and the systems from web-based malware, helps avoid data loss and further facilitates the administrations to control the employee behavior on the internet is referred to as corporate web security. The web access continues to be the most predominant method through which malware creeps into the association. Malware includes internet attacks such as viruses, rootkits, adware, spyware, among many others. Majority of these attacks are based around stealing confidential data from the users and organizations. These attacks often lead to productivity loss, business loss and many other complications that the enterprises are facing today. Due to all these reasons, corporate web security is facing stronger demand in the near future. Corporate web security can be deployed as appliance services, cloud services, on-premises or as the hybrid solutions.
