Corrosion control programs refer to a series of measures and strategies taken to prevent, slow down or prevent corrosion of metal materials (such as steel) in water pipes and other equipment. The destruction of metal surfaces caused by chemical reactions or electrochemical reactions under the action of the surrounding medium is called corrosion. Corrosion control aims to regulate the interaction between metal materials and the environment, protect the strength and function of metal equipment, structures or parts, so that they will not be deteriorated or even destroyed due to corrosion, so as to achieve long-term safe operation.

The global Corrosion Control Program market size is projected to grow from US$ million in 2024 to US$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
