Abstracts

The global Corrosion Management Program (CMP) market size is predicted to grow from US$ 2951 million in 2025 to US$ 3984 million in 2032; it is expected to grow at a CAGR of 4.4% from 2026 to 2032.

The Corrosion Management Program (CMP) is a comprehensive strategy that aims to develop steps and measures to prevent, monitor and mitigate corrosion problems in various industries and fields. To ensure the long-term integrity and reliability of assets of organizations involved in corrosion-prone assets and infrastructure (such as oil and gas pipelines, bridges, ships, buildings, etc.). Its purpose is to reduce the risks posed by corrosion, extend the service life of assets, and improve overall operational efficiency through effective management and control measures.The industry's gross profit margin ranges from approximately 25% to 40%.

Key market drivers include the following:

Long-term operation of industrial assets drives the need for systematic corrosion risk management

Industries such as petrochemicals, power generation, offshore engineering, and manufacturing rely on extensive metal equipment and piping that operate over long periods; corrosion issues can compromise equipment safety, production continuity, and asset lifespan. As industrial facilities age, enterprises are shifting from traditional reactive maintenance to proactive preventive management. By establishing Corrosion Management Plans (CMPs) to identify, assess, monitor, and control corrosion risks, they can enhance equipment operational reliability.

Regulatory oversight and safety requirements spur the development of standardized management systems

Requirements regarding workplace safety, environmental protection, and equipment integrity are rising in high-risk industrial sectors, with regulators and industry standards increasingly mandating strict corrosion control for pressure vessels, pipelines, and critical equipment. Enterprises must implement robust corrosion management systems to ensure compliance while mitigating risks such as leaks, production shutdowns, and environmental incidents, thereby driving the adoption of CMP-related services and software tools.

Digital technologies enable corrosion prediction and precision maintenance

Advancements in IoT sensors, data analytics, artificial intelligence, and equipment management platforms allow enterprises to collect real-time corrosion data and forecast trends. Digital CMP solutions help enterprises optimize inspection and maintenance schedules, improve maintenance efficiency, and reduce unnecessary equipment replacement costs, facilitating a transition in corrosion management from an experience-driven approach to a data-driven one.
