The global Corrosion Modelling Software market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Corrosion modeling software is a computer program designed to simulate and predict the corrosion behavior of metals and other materials in specific environments. This software uses corrosion models to predict the service life, corrosion rate, and possible corrosion patterns of materials by inputting material properties, environmental parameters (such as temperature, humidity, chemical concentration, etc.), and structural geometry data. Corrosion modeling software can help engineers consider corrosion problems during the design phase, so as to select appropriate materials and protective measures and reduce maintenance costs and risks.

United States market for Corrosion Modelling Software is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
