Corrosion protection rubber products are industrial rubber materials based on natural or synthetic rubber, formulated with anti-corrosion fillers and modified compounds. They are designed to protect equipment surfaces or piping systems in corrosive environments such as acids, alkalis, salts, and organic solvents, thereby extending service life. They are widely used in chemical, power, metallurgy, environmental protection, and marine engineering industries.

The upstream of corrosion protection rubber products includes natural rubber, synthetic rubbers such as SBR and neoprene, as well as additives like carbon black, curing agents, and plasticizers. The midstream consists of formulation and manufacturing companies producing anti-corrosion liners, pipe linings, and protective coatings through processes such as lining, coating, and composite molding. Downstream applications are concentrated in chemical equipment, storage tanks, pipeline systems, flue gas desulfurization units in power plants, and marine engineering facilities, all requiring high chemical resistance and long-term stability.

United States market for Corrosion Protection Rubber Products is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through
