The global Corrugated Sidewall Conveyor Belt market size is predicted to grow from US\$ 948 million in 2025 to US\$ 1184 million in 2032; it is expected to grow at a CAGR of 3.3% from 2026 to 2032.

The corrugated sidewall conveyor belt is mainly composed of three parts: base belt, sidewall and diaphragm. The sidewall is designed to be corrugated, which mainly prevents the material from slipping and scattering; the diaphragm is used to support the material to achieve large-angle conveying. The sidewall and diaphragm are usually connected to the base belt by secondary vulcanization to ensure high connection strength. The corrugated sidewall conveyor belt can cover the transportation of all materials from 0 to 90 degrees, and is the most technical and economical solution for the transportation of inclined materials. Since large-angle conveying can be achieved, ground space can be effectively saved. The corrugated sidewall conveyor belt can transport powdery, granular, small-block, paste-like and liquid materials that are easy to scatter, and is widely used in steel mills, ports, sand and gravel plants, foundries, coal plants, mines, chemical plants, fertilizer plants and other fields.

United States market for Corrugated Sidewall Conveyor Belt is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
