Corrugated stainless steel tubing for gas is a flexible gas-piping material manufactured from thin-wall Type 304, 304L, 316L or other austenitic stainless steel strip through longitudinal welding, leak testing, annealing and continuous corrugation. It is normally covered with PE, LDPE, PVC, conductive flame-retardant polymer or multilayer metallic shielding and supplied in coils for field cutting and assembly with certified proprietary fittings. The tubing is primarily used to convey natural gas, LPG and other approved fuel gases in fixed building piping systems. Major upstream inputs include precision stainless steel strip, polyethylene and engineered polymers, flame-retardant and conductive compounds, bonding materials, and welding, annealing, corrugation and jacket-extrusion equipment. Downstream customers include CSST system manufacturers, gas utilities, plumbing and HVAC contractors, construction companies and building-material distributors, serving residential, hospitality, foodservice, healthcare, education, commercial-building, boiler-room and light-industrial applications.
