Corundum Brick is a durable and abrasion-resistant material made from synthetic corundum, typically used in industrial settings for applications such as grinding, polishing, and cutting due to its high hardness and strength. It is produced by shaping and firing synthetic corundum powder, which is an artificial form of aluminum oxide (Al₂O₃) enhanced with various elements to increase its hardness and improve its properties for specific uses. These bricks are widely used in the manufacturing of Abrasives, Refractory products, and as an important component in grinding wheels, sandpapers, and other abrasive tools.

The global Corundum Brick market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
