## Abstracts

The global Cosmetic Grade Dipotassium Glycyrrhizinate market size is predicted to grow from US\$ 35.18 million in 2025 to US\$ 57.59 million in 2032; it is expected to grow at a CAGR of 7.4% from 2026 to 2032.

Dipotassium Glycyrrhizinate (DPG) is a water-soluble salt derived from glycyrrhizic acid, a natural compound extracted from licorice root (*Glycyrrhiza glabra*). It is widely used in cosmetic, pharmaceutical, and personal care applications due to its anti-inflammatory, anti-allergic, anti-irritant, and skin-soothing properties. Chemically stable and non-toxic, DPG is particularly effective at modulating inflammatory responses and reducing redness or irritation, making it ideal for sensitive skin formulations.

In cosmetics and skincare, it is commonly found in products like facial cleansers, sunscreens, serums, creams, and masks, especially those targeting eczema, acne, and rosacea. In pharmaceuticals and oral care, it is used in topical corticosteroids, throat lozenges, and toothpaste for its soothing and anti-ulcer activity. DPG is often preferred over raw licorice extracts due to its standardized composition, enhanced water solubility, and higher safety profile.

The Dipotassium Glycyrrhizinate market is growing steadily, driven by consumer demand for natural, anti-inflammatory ingredients in skincare, oral care, and pharmaceuticals. Its ability to address redness, irritation, and allergic reactions makes it indispensable in modern formulations, especially as global consumers shift toward milder, more plant-based products. While challenges related to raw material supply persist, the market is likely to expand further as DPG finds new applications in clean beauty, therapeutic skincare, and wellness-driven product lines.

The growth of the “sensitive skin” and “clean beauty” movements has significantly increased the demand for gentle, plant-derived actives like dipotassium glycyrrhizinate. Consumers increasingly seek products that avoid harsh chemicals and instead use natural, dermatologically safe ingredients. DPG’s ability to reduce inflammation, inhibit histamine release, and calm irritation positions it as a go-to functional ingredient in both premium and mass-market skincare lines worldwide.

With growing awareness around sun protection and skin barrier health, DPG is being used more frequently in sun care products for its ability to counteract UV-induced irritation and erythema. Additionally, it’s gaining traction in post-laser and post-peel skincare for its calming effects on damaged or inflamed skin. The rise in cosmetic dermatology treatments is creating demand for adjunct ingredients like DPG that can accelerate skin recovery and improve user comfort.

Asian markets, especially Japan, South Korea, and China, have long embraced licorice-based ingredients due to traditional herbal medicine roots. DPG continues to see widespread use in herbal and cosmeceutical products in these regions. In China, it is frequently used in whitening, acne control, and TCM-inspired personal care products. As K-beauty and J-beauty influence spreads globally, DPG is also finding new markets in Europe and North America.
