Glutathione is capable of preventing damage to important cellular components caused by reactive oxygen species such as free radicals, peroxides, lipid peroxides and heavy metals, improving antioxidant capacity of skin, delaying skin aging and making skin glowing. It can also prevent skin pigmentation and the formation of new melanin, thus it has the function of lightening and whitening the skin. In addition, it's a small molecular peptide produced by fermentation which is easily absorbed by the skin through cell membranes, so it is very effective as a cosmetic for external use.
