The global Cosmetic-grade Inorganic Pigments market size is predicted to grow from US$ 121 million in 2025 to US$ 138 million in 2031; it is expected to grow at a CAGR of 2.3% from 2025 to 2031.

Cosmetic-grade inorganic pigments are a type of color additive that are used in the formulation of cosmetics and personal care products. Inorganic pigments are made up of mineral-based compounds, such as metal oxides, and are often preferred over organic pigments due to their stability, lightfastness, and resistance to chemical and UV degradation. The most common cosmetic grade inorganic pigments are iron oxide and titanium dioxide. Iron Oxides used in cosmetic products is an inorganic compound consisting of any one or combinations of synthetically prepared iron oxides that includes hydrated forms of iron oxides. Iron Oxides impart a color to cosmetics and personal care products.

The world's core manufacturers of Cosmetic-grade Inorganic Pigments include Lanxess, Oxerra and Tronox. The top three companies account for about 92 percent of the market. Europe is the world's largest market for Cosmetic-grade Inorganic Pigments with a market share of about 35%, followed by Asia Pacific and North America with a market share of 32% and 25%, respectively. In terms of product type, Cosmetic Grade Red Iron Oxides is the largest segment with approximately 30% market share. In terms of application, Lip Products is the largest downstream segment, accounting for about 30% of the market share.
