The global Cosmetic Grade Isopropyl Lanolate market size is predicted to grow from US\$ 33.51 million in 2025 to US\$ 49.08 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

Cosmetic grade lanolin isopropyl ester is an oily ester softener raw material obtained from the esterification of lanolin derived fatty acid and isopropanol. The appearance is usually colorless to light yellow liquid or semi-solid, with good spread and lubrication. It can form a soft hydrophobic film on the skin and hair surface, thus providing the role of moisturizing, water locking, improving skin feeling and enhancing gloss. It is commonly used in face cream lotion, lip care and cream repair products, sunscreen and makeup cream, hair conditioner, hair oil and styling products; Cosmetic grade emphasizes the control of odor, color, acid value and peroxide value, as well as potential impurities such as pesticide residues and polycyclic aromatic hydrocarbons, to meet the safety and stability requirements of daily chemical formulas. In 2025, global Cosmetic Grade Isopropyl Lanolate production reached approximately 2,526 Tons, with an average global market price of around US\$ 13.56 per kg.

The annual production capacity of cosmetic grade lanolin isopropyl is 3,500 tons, with a gross profit margin of about 25%.

The upstream mainly comes from the lanolin industry chain and the supply of alcohols and auxiliary materials. Key inputs include lanolin or lanolin fatty acid fractions, isopropanol, esterification catalysts and neutralizers, antioxidants and stabilizers, decolorization adsorption materials, filtration media, as well as packaging containers and label materials. At the same time, it also relies on utilities such as steam, electricity, cooling water, and vacuum systems.

The downstream mainly enters the personal care and cosmetics formula system, which is used as a skin moisturizer and skin feeling improver for face cream lotion, sunscreen and makeup cream, lip care and repair cream, hair conditioner and hair oil styling products. The customer types include formula factories, daily-use chemical brands and raw material distribution channels. The demand is closely related to the trend of high-end skin care, sensitive muscle and low-flavor formula, as well as the requirements for traceability and compliance documents.

The cost of raw materials usually accounts for 55% to 75% of the total cost, manufacturing expenses account for about 10% to 18%, quality and compliance and testing account for about 5% to 12%, packaging and logistics account for about 4% to 10%, and management and sales account for about 5% to 10%.
