The global Cosmetic Grade Monoammonium Glycyrrhizinate market size is predicted to grow from US\$ 4.69 million in 2025 to US\$ 7.26 million in 2032; it is expected to grow at a CAGR of 6.6% from 2026 to 2032.

Cosmetic Grade Monoammonium Glycyrrhizinate (MAG) is a refined derivative of glycyrrhizic acid, extracted from the roots of the licorice plant (*Glycyrrhiza glabra*). This compound is presented as a white crystalline powder, characterized by its high purity and suitability for cosmetic applications. MAG is renowned for its potent anti-inflammatory, soothing, and skin-conditioning properties, making it a valuable ingredient in various skincare and personal care products.

In cosmetic formulations, MAG functions primarily as an anti-inflammatory agent, helping to alleviate skin irritation, redness, and discomfort. Its ability to inhibit the activity of hyaluronidase and reduce capillary permeability contributes to its effectiveness in soothing sensitive skin. Additionally, MAG exhibits antimicrobial properties, which aid in preserving the integrity of cosmetic products and protecting the skin from microbial invasion.

The compound's compatibility with other cosmetic ingredients and its stability under various formulation conditions enhance its versatility. It is commonly incorporated into products such as creams, lotions, serums, and facial masks, particularly those designed for sensitive, inflamed, or acne-prone skin. Furthermore, MAG's natural origin aligns with the growing consumer preference for plant-based and clean-label cosmetic products.

The global market for Cosmetic Grade Monoammonium Glycyrrhizinate is experiencing

significant growth, driven by increasing consumer demand for natural and effective skincare solutions. The compound's multifunctional properties and its alignment with clean beauty trends position it as a sought-after ingredient in the cosmetics industry.

Key Market Drivers include:

Rising Demand for Natural Ingredients: Consumers are increasingly seeking skincare products formulated with natural and plant-derived ingredients. MAG, being sourced from licorice root, fulfills this demand, offering a natural alternative to synthetic anti-inflammatory agents.

Growth of Sensitive Skin Care Segment: The prevalence of sensitive skin conditions has led to a surge in demand for gentle and soothing skincare products. MAG's anti-inflammatory and calming properties make it an ideal ingredient for formulations targeting sensitive skin.

Expansion of Clean Beauty Movement: The clean beauty movement emphasizes transparency, safety, and sustainability in cosmetic products. MAG's natural origin and proven efficacy align with these principles, enhancing its appeal to both manufacturers and consumers.
