The global Cosmetic-grade Styrene Acrylate market size is predicted to grow from US$ 633 million in 2025 to US$ 952 million in 2032; it is expected to grow at a CAGR of 6.1% from 2026 to 2032.

Cosmetic-grade Styrene Acrylate is a high-purity copolymer resin synthesized from styrene and various acrylate monomers, formulated to provide film-forming, gloss-enhancing, and color-dispersion properties in cosmetic and personal care products. It is typically supplied as a fine powder, emulsion, or bead, designed for use in foundations, lipsticks, nail lacquers, mascaras, and sunscreens where transparency, adhesion, and water resistance are required. The supply chain begins with upstream petrochemical feedstocks such as styrene, butyl acrylate, and methyl methacrylate derived from crude oil and natural gas; midstream production involves emulsion or suspension polymerization in specialized reactors, followed by purification, drying, and micronization; downstream, the polymer is supplied to cosmetic formulators and brand owners who blend it with pigments, surfactants, and emollients to produce finished beauty products. In 2024, global Cosmetic-grade Styrene Acrylate output reached about 118,000 tons with capacity near 145,000 tons, priced at USD 4,200–8,800 per ton, and an average gross margin of 33%.
