The global Cosmetic Keratin market size is predicted to grow from US\$ 34.7 million in 2025 to US\$ 44.6 million in 2031; it is expected to grow at a CAGR of 4.3% from 2025 to 2031.

Keratin can be used in cosmetics. Keratin has highly resistant physicochemical properties and special biological functions, and plays an important role in maintaining the normal physiological functions of the epidermis. The application of keratinase in beauty and skin care products helps active factors penetrate the skin barrier, remove excess cutin of the skin, realize deep skin care and hair removal research, and has a good prospect in the field of skin beauty.

The total size of the global beauty industry in 2022 was about US\$ 427 billion, with the sales of skin care products was about US\$ 190 billion, perfumes US\$ 70 billion, color cosmetics US\$ 80 billion, hair care products US\$ 90 billion. Head beauty and personal care companies are concentrated in Europe and the United States. More than one-third of the top 100 companies are headquartered in the United States, and 22.9% of the companies are located in France. As people increasingly prioritize beauty and skincare, the cosmetics industry is constantly evolving to meet consumer demands. In recent years, one ingredient that has garnered significant attention is keratin, which plays a crucial role in cosmetics. Keratin is a natural protein found in the stratum corneum of both humans and animals and possesses formidable moisturizing and skin-protecting capabilities. It aids in maintaining skin health and elasticity while reducing the appearance of fine lines and wrinkles, making it highly desirable among consumers.
