The global Cosmetic Organic Pigments market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Organic pigments have bright colors and strong tinting power. Non-toxic, but the light resistance, heat resistance, solvent resistance and migration resistance of some varieties are often not as good as those of inorganic pigments. Compared with ordinary pigments, organic pigments usually have higher tinting power, the particles are easy to grind and disperse, are not easy to precipitate, and the colors are more vivid. Organic pigments are commonly used in cosmetics and personal care products, from lipstick and eye shadow to nail polish and foundation, where they provide vibrant, long-lasting color to enhance the look. Because organic pigments are derived from natural sources, they are generally considered safe to use on the skin and do not cause allergies or irritation. They are widely used by professional makeup artists and individuals who prefer natural, non-toxic beauty products.
