The global Cosmetics Analysis Service market size is predicted to grow from US\$ 2852 million in 2025 to US\$ 4606 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

Cosmetics Analysis Service refers to professional testing, analysis, and evaluation services for cosmetics and personal care products. It covers testing and verification of raw materials, formulations, semi-finished products, finished products, and packaging materials in terms of safety, efficacy, stability, microbiological quality, ingredient compliance, and contaminant control. Its service objective is to help brand owners, OEM/ODM manufacturers, raw material suppliers, and retailers confirm product quality and regulatory compliance, supporting product development, market registration, claim verification, and international market access.

In recent years, the market has continued to develop towards higher specialization and higher added value, driven primarily by three factors: First, increasingly stringent global cosmetic regulations have increased companies' demand for ingredient compliance, toxicological assessment, microbial control, and pre-market validation. Second, brands are placing greater emphasis on 'verifiable efficacy,' driving growth in efficacy testing, clinical/consumer testing, image analysis, and claim support services. Third, the increasing complexity of supply chain management has led to a simultaneous rise in demand for raw material screening, contaminant monitoring, packaging compatibility, and end-to-end quality assurance.

From a segmented perspective, the market is gradually expanding from traditional basic physicochemical testing to preservative challenge testing, heavy metal and allergen screening, analysis of new substances of concern such as PFAS, environmental and

packaging safety assessments, and more refined efficacy validation. Simultaneously, with the continuous strengthening of European cosmetic regulations regarding product safety evidence and microbiological quality requirements, and brands' increased focus on sustainable packaging and ingredient transparency, testing and analysis services are increasingly being embedded in all stages of R&D, registration, marketing claims, and supply chain audits.
