A Cost Control System is a system for calculating, analyzing, and simulating costs. To begin with, cost generally refers to the expenses required for manufacturing and selling products and providing services. Data related to cost can be categorized into material cost, labor cost, and manufacturing cost by form, direct cost and indirect cost, variable cost, and fixed cost. In addition, this data can vary fluidly or be prorated across the entire product. A Cost Control System is a system to grasp and control such costs accurately and in real-time.

Cost Control Systems collect and manage cost-related data, which must be handled in conjunction with other business systems such as inventory control, sales management, and accounting. Therefore, Cost Control Systems are often provided as a part of ERP (Enterprise Resource Planning) functionality, enabling smoother and more accurate cost control through data integration with other business systems.
