Costus Oil mainly contains volatile oil, and its active component is mainly sesquiterpene lactone, which has the functions of relaxing smooth muscle, spasmolysis and moderately lowering blood pressure. The incense oil is a brownish brown viscous volatile essential oil with special incense and burnt incense. The powder is brownish purple or yellowish brown, soluble in ethanol, most non chemical book volatile oils and mineral oils, and insoluble in glycerin and propylene glycol. It is made from the dried (shady) roots of *Coriandrum sativum*, a perennial herb of the genus *Aegilops*, crushed, distilled with steam or extracted with solvent, and then distilled with resinous extract.

The global market for Costus Oil is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

Costus Oil, a perennial herb of Compositae, is the dried root of *Aucklandia lappa* Decne. The main components of *Aucklandia* are oil, sterols, alkaloids and organic acids. In recent years, pharmacological and pharmacodynamic studies have found that the main effective components of incense oil are a mixture of multiple sesquiterpenoids mainly composed of costunolide and dehydrocostuslactone, which have obvious pharmacological effects in anti-inflammatory, anti-tumor, anti-virus, inhibition of vasoconstriction and immune regulation.
