Cots for Air-Jet Spinning are key components in the drafting system of air-jet spinning machines, primarily installed on the front, back, or delivery rollers. Their function is to achieve stable fiber grip, tension control, and yarn guidance during high-speed spinning through high-precision surface structure and elasticity control. Air-jet spinning is a twist-free spinning technology that uses compressed air to form the yarn structure. This requires the cots to possess extremely high wear resistance, heat resistance, dimensional stability, and fiber control capabilities. High-quality cots significantly reduce end-down rates, improve yarn quality, and extend equipment lifecycles, making them essential consumables for air-jet spinning systems.

United States market for Cots for Air-Jet Spinning is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
